SURVEY OF WEEKLY EARNINGS, OCTOBER, 1965General

1. A survey of weekly earnings of male employees was conducted for the last pay-period in October, 1965. The survey was conducted by means of - (i) a sample of private employers subject to pay-roll tax (that is those paying more than \$400 a week in wages and salaries); (ii) a complete coverage of Commonwealth and State government departments and semi-government authorities; and (iii) a sample of Local government authorities. It related to certain specified industry groups only (see paragraphs 5 and 6).

2. In designing the survey, great care was taken to ensure that all terms and concepts used were defined as explicitly as possible to ensure uniform treatment by the respondents completing the returns. Further assistance was given to many respondents who sought additional clarification in relation to their own particular circumstances. After receiving the completed returns from the respondents, checking and comparison with other data made it necessary to query a very high proportion of the returns back to the respondents so that their understanding of the instructions and definitions could be checked.

3. The object of the survey was to obtain estimates of the numbers and proportions of full-time adult male employees in various weekly earnings groups (see Tables 3 to 14 and 25) and a dissection of total weekly earnings paid to full-time adult males (see Tables 15 to 24) into - (i) overtime earnings; (ii) ordinary time earnings at "award, etc. rates"; and (iii) ordinary time earnings in excess of those at "award, etc. rates" (divided into (a) payment by measured result, and (b) other) - as defined below. The survey also provided figures of average weekly earnings for full-time adult male and junior male employees (see Tables 1, 2 and 24). Separate details were obtained for - (a) managerial, executive, professional and higher supervisory staff, and (b) other full-time male employees.

4. Information of a similar type was obtained in respect of September, 1960 from a sample survey of private employers only. However the present survey as well as adopting the standard industry classification used for the 1961 Population Census, also differs from the 1960 survey in the range of industries included. In addition, the present survey is on a more comprehensive basis than the 1960 one. For these reasons, and also because of the possible effects of sampling variability, no comparison has been attempted.

Coverage

5. The current survey related to private and government employees in the industry groups shown below. The industry classification is that used in the 1961 Population Census.

Manufacturing -

Extracting, refining and founding
of metals
Engineering and metalworking
Ships, vehicles, parts and accessories
Textiles, clothing and footwear
Food, drink and tobacco
Paper, printing, bookbinding and
photography
Chemicals, dyes, explosives, paints,
non-mineral oils
Other

Non-manufacturing -

Mining and quarrying
Electricity, gas, water
and sanitary services
Building and construction
Transport, storage and
communication
Wholesale trade, primary
produce dealing, etc.
Retail trade

6. The industry groups excluded from this survey were - Primary production; Finance and property; Public authority activities, n.e.i. (e.g. Commonwealth, State and Local government administration); Community and business services; Amusement, hotels, cafes, personal services, etc. The survey also excluded waterside workers employed on a casual basis, and all employees in the Northern Territory and the Australian Capital Territory.

7. Private employers were surveyed by means of a stratified random sample of those employers subject to pay-roll tax. Approximately 3,000 private employers were included in the survey and completed returns were received from over 99.9% of them.

8. The results of the survey of private employers were representative of the experience of an estimated 1,181,000 full-time adult male employees. In the government (i.e. Commonwealth, State and Local) sector the survey covered 409,000 full-time male employees.

9. The sample of private employers had to be restricted to those subject to pay-roll tax. The industry classification of these employers was generally according to major activity. Mainly for these reasons, the survey estimates of total numbers of private and government employees do not correspond to totals of employment of all adult males in the specified industries.

Results of the Survey

10. As the private employer part of the survey was based on a sample, the resultant estimates are subject to sampling variability, that is, variations which might occur by chance because only a sample of employers was surveyed. The extent of the detail published has been determined after considering estimated measures of sampling variability. The published figures are presented as useful indicators of the distribution and composition of average earnings for a significant proportion of employees.

11. The estimates are shown for adult males classified by industry groups, by States and by government or private employment. Therefore, reflected in these estimates will be the effects of differences in amounts paid for the various occupations; of differences in amounts paid for the same occupations; of differences in occupational structure within industries; and of differences in industry structure, both as between States and as between government and private employment.

12. Employers (private and government) were asked to comment on any full-time adult male employees shown as earning (a) "Less than \$30", or (b) "\$30 and less than \$32" in the survey week. From these comments it was possible to omit from these two weekly earnings groups those adult males who were not paid for a full week. Those who were confirmed as full-time adult males being paid for a full week and earning less than \$32 represented a total of approximately 300. They were reported by respondents as being "persons on the basic wage", "adult messengers", "elderly persons", "persons on training rate", "salesmen earning retainer only in the specified week", etc. Similarly it is probable that in completed returns there were a number of employees who earned \$32 and over in the specified pay-period even though they were not paid for a full week. It has not been possible to ensure that all such employees have been omitted from these estimates for "full-time" adult males.

13. On the return forms the categories "Managerial, executive, professional and higher supervisory staff" and "All other full-time employees" were defined. However, the allocation of employees between these categories depended on the judgement of the individual employers (both private and government) completing the returns.

14. Tables 15 to 24 show estimates of the average amounts and of the relative importance of the components of total weekly earnings (i.e. overtime earnings, ordinary time earnings at "award etc. rates", and ordinary time earnings in excess of those at "award etc. rates"). These details were obtained from each employer in the form of totals for each component part in respect of all his full-time adult male employees. Details were not sought of the number of employees receiving various amounts of these components and thus no information is available about the distribution of employees about the averages. The averages shown for these components relate to the total of all employees in the survey, not just to the number of employees who received payments in these categories.

15. In the tables showing estimates of average earnings (or dissections of average earnings) the estimates have been rounded to the nearest 10 cents.

16. When using the estimates of "Ordinary Time Earnings at Award, etc. Rates" it should be borne in mind that, in addition to minimum award rates specified for particular occupations, this category was defined to include all loadings, allowances, etc. prescribed in the awards, etc. In addition, for employees not covered by an award, etc. the normal (or agreed) rates of pay for normal hours of work were defined as coming within the scope of "Ordinary Time Earnings at Award, etc. Rates".

Definitions

17. The following definitions refer to terms used in the survey and in the following tables.

18. "Adult Males" include all male employees over 21 years of age and those males who, although under 21 years of age, are paid at the adult rate for their occupation. "Junior Males" include all other males under 21 years of age.

19. "Full-time Male Employees" were defined as those who ordinarily work 30 hours or more a week. Employees on "short-time" or those who began or ceased work during the specified week and part-time employees were excluded from this survey. Instructions were also given that employees who were not paid for a full week's work because of absenteeism, sickness, accident, etc. were to be excluded.

20. "Other Than Managerial, etc. Staff" includes minor supervisory staff, leading hands, clerical and office staff as well as ordinary wages employees. It excluded "Managerial, executive, professional and higher supervisory staff" which were not further defined.

21. "Private Employees" represents employees of private employers. "Government Employees" represents employees of Commonwealth and State government departments and semi-government authorities and of Local government bodies.

22. "Total Weekly Earnings" refers to gross earnings of male employees for the last pay-period in October, 1965 before taxation and other deductions. It includes payments directly attributable to work performed during the week for which payment was made (or to sick leave taken), for example, ordinary time, overtime, shift allowances, penalty rates, commission (if paid weekly) and similar payments. For payments made other than on a weekly basis only one week's proportion is included, for example, salaries paid fortnightly or monthly; payment for those on annual leave; periodical payments under incentive, piecework, commission, profit sharing schemes, etc.; annual or other periodical bonuses; etc. Retrospective payments are excluded.

23. "Overtime Earnings" represents that part of total weekly earnings of full-time adult male employees for the last pay-period in October, 1965, for time worked in excess of award hours, or, in the case of those employees not affected by awards, etc., in excess of standard, or agreed, hours of work.

24. "Awards or Registered Agreements" refers to awards or determinations of, or agreements registered with, Commonwealth or State industrial tribunals.

25. "Ordinary Time Earnings at Award, etc. Rates" comprises

(a) where there was an appropriate award or registered agreement operating, the rates specified in the award for the hours of work paid for (up to the award hours) plus any other payments (excepting overtime) e.g. dirt money; height money; penalty rates; shift work, confined spaces, tool, leading hand, camping, etc. allowances, provided for in the award or registered agreement and at the rates specified in the award or registered agreement;

(b) where there was no appropriate award or registered agreement operating (including the case of managerial, executive, professional and higher supervisory staff not covered by awards), rates of pay and hours of work covered by an unregistered agreement (if one existed). Otherwise the terms of employment as agreed for each person for wages, salaries, retainers, hours of work, etc. relating to a normal working week were used. Excluded

were commissions, bonuses, etc.;

(c) for employees under incentive, piecework, etc. schemes, only that part of their ordinary time earnings such as the retainers, base rates or award minima.

26. "Ordinary Time Earnings in Excess of those at Award, etc. Rates"

(i) "Based on Payment by Measured Result" included that part of earnings in excess of award or agreed base rate earnings, which was variable from one period to another depending on measured performance of the employees, for example, incentive payment schemes, piecework, task bonus, commission, etc.

(ii) "Other" included all ordinary time earnings in excess of those at "award etc. rates" not described in 26(i) above. Included were special attendance or good time-keeping bonuses, proportion of annual or other periodical bonuses, profit sharing scheme earnings and any other forms of over-award payments.

NOTE.- Any discrepancies between totals and sums of components in tables in this publication are due to rounding.
